

Environmental Sustainability Policy

Environmental Sustainability and Circular Economy are at the forefront of HPower's vision for the coming decade. In planning events, HPower identifies opportunities to reduce waste, reuse materials and increase recycling. HPower's aim is to create greener events in line with UNSDG 2030.

HPower is working towards delivering multiple sustainable initiatives at all its events so as to ensure we deliver a carbon neutral environmental legacy. These initiatives range from careful sourcing of materials, working with our supply chain and recycling waste products in keeping with the global target of a Zero Carbon footprint by 2050.

Among many other initiatives, HPower has already banned 'single-use' bottles at Royal Windsor Horse Show and in 2019, 100% of all carpet was recycled at Olympia, The London International Horse Show 2019 and 86% of waste was recycled.

Here at HPower we are continuing to explore ways to manage the waste generated at events and to reduce our carbon footprint.
